AJAY CHAKRAVARTHY G

DevOps Engineer | GitLab CI/CD · Kubernetes · AWS · DevSecOps · Fintech

+91 86670 07330 | ajay.chakravarthyg@gmail.com | linkedin | github | Chennai, India | Open to: Bangalore, Hyderabad, Coimbatore

SUMMARY

DevOps Engineer with around 2.5+ years of hands-on experience in CI/CD automation within a product-based Fintech environment. Experienced in building and optimizing GitLab CI/CD pipelines for microservices-based digital banking platforms. Skilled in containerization using Docker and Kubernetes, with hands-on experience in AWS (EC2, ECR, ELB, Aurora). Strong understanding of DevSecOps practices, Linux systems, production support and automated release workflows.

SKILLS

CI/CD: GitLab CI/CD, GitLab Runner, Jenkins, GitHub Actions, Argo CD (GitOps), Maven, Gradle, Nexus
Containers: Docker, Podman, Kubernetes, Rancher RKE2
AWS: EC2, ECR, ELB, Aurora, VPC, IAM, S3, CloudWatch, AWS CLI, cost optimization, RDS, EKS, Auto Scaling, CloudTrail
Monitoring & Alerting: Prometheus, Grafana, Elasticsearch, Kibana, Elastic Fleet
DevSecOps: SonarQube, Semgrep, Trivy, Mend, OSV, OWASP ZAP, Dependency-Check, Docker Scout, Cosign, SBOM, SCA, SAST, DAST
Mobile CI: xcodebuild, CocoaPods, Gradle, Firebase App Distribution
Other: Bash, YAML, Linux (Ubuntu, RHEL, CentOS), Git, Claude/Gemini APIs, Jira, Confluence, Python
IaC (learning): Terraform, Ansible

EXPERIENCE

Tagit | Product-based fintech: digital banking platforms (Mobeix) for banks
DevOps Engineer (Jun/2026 – Present) · Associate DevOps Engineer (Apr/2025 – May/2026) · Trainee DevOps Engineer (May/2024 – Mar/2025)

CI/CD Platform

- Migrated the Mobeix platform from Jenkins to GitLab CI/CD with a central trigger pipeline orchestrating 15+ downstream pipeline.
- Built CI/CD for 10+ microservice repos behind three banking products, automating build, test and Nexus Artifact publishing.
- Designed modular, reusable GitLab CI templates used self-service by 50+ developers across product teams.
- Automated Android and iOS builds (Gradle, xcodebuild, CocoaPods) with delivery to testers via Firebase App Distribution.
- Diagnosed and fixed recurring build failures across iOS, Android, Angular and Java (Maven) pipelines in GitLab CI, keeping builds green for developers.

AWS

- Built and maintain the GitLab Runner server on a high-memory Ubuntu EC2 instance, running parallel CI/CD jobs for 50+ developers.
- Created container registries in Amazon ECR and automated image build, tag and push from GitLab CI/CD pipelines.
- Configured Elastic Load Balancers to route traffic for three applications.
- Set up Amazon Aurora databases and managed application connectivity and backups

Kubernetes & Production Support

- Operate on-prem Kubernetes clusters (Rancher RKE2) hosting the Mobeix platform microservices and banking products
- Scheduled nightly builds deployed to Kubernetes through Argo CD, following GitOps principles.
- Set up Prometheus, Grafana and Kibana alerts on production servers to catch failures early (high CPU/memory, disk full, pod restarts, service down) before they become outages.
- Provide on-call and after-hours support for production, pre-prod and SIT environments, keeping banking services available overnight and on weekends.

DevSecOps

- Built a change-aware security pipeline (Semgrep, SonarQube, Trivy) for a 5-component monorepo that scans only modified components, cutting scan time by 70%.
- Integrated Mend SCA reports for bank clients, Cosign image signing, SBOM generation and SonarQube quality gates with JaCoCo coverage.

AI-Assisted Engineering

- Built an AI code-review bot (Claude + Gemini APIs) that posts structured review threads on GitLab merge requests, reducing manual review time by 80%.
- Built Claude Code skills that install each product end-to-end on demand: the skill downloads the release package from Nexus and runs shell scripts to set up the full Docker stack, turning a manual install into one command.

Career Break | 2021 – 2023 — Took time off to support family during an unexpected situation.

EDUCATION & CERTIFICATIONS

Bachelor of Engineering — PSG Institute of Technology and Applied Research, Coimbatore | 2017 – 2021
AWS Certified Solutions Architect – Associate
Achievement: Promoted twice in 2 years — Trainee → Associate → DevOps Engineer.
